Art Unit: 1774

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

The specification is objected under 35. U.S.C. 112 and 37 CFR 1.71 because: it fails to provide an adequate written description of the invention and fails to provide and enabling disclosure.

The specification as filed fails to set forth 1) the type of molecular weight for component B polyalkylene glycol. See page 3-10 of spec. There is no guidance or direction of the type of molecular use to make the modified polyester filament of claim 1 in component B polyalkylene glycol. There are no working examples of the type of molecular weight use for the polyethylene glycol of claim 3. Thus, there would be an undue experimentation burden on the public to practice the invention as claimed.

Claims 1-11 are rejected under 35 U.S.C. 112, first paragraph, for the reasons above in the objection.

To overcome the above rejection Applicant should file a CIP application.
